DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-50, drawn to a system for separating sample molecules, classified in class 204, subclass 600.
 - II. Claims 51-77, drawn to a method for separating molecules using a system with electrodes, classified in class 204, subclass 450.
 - III. Claims 78-117, drawn to a microstructure plate, classified in class 435, subclass 288.4.
 - IV. Claims 118-147, drawn to a method for separating molecules using a plate without electrodes, classified in class 204, subclass 450.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Groups I and III and Groups II and IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatuses of Groups I and III can be used to practice another process such as performing an electrolytic reaction in the case of Group I and performing a non-electrolytic chemical reaction in the case of Group III.

3. The inventions of Group I and Group III are distinct because they can be used for different purposes. The system of Group I has electrodes, while the plate of Group III does not contain electrodes. Therefore, the plate of Group I can be used to perform electrolytic operations and reactions.

4. The inventions of Group II and Group IV are distinct because they use different apparatuses, which subsequently require the use of different method steps. Group IV requires a step of placing electrodes in contact with the sample wells, while Group II uses electrodes that are already in place in the system.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group III and the search required for Group II is not required for the search of Group IV, restriction for examination purposes as indicated is proper.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1753

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
